

PLUM VARIETIES 2020

Variety	Approx. Harvest	Fruit & Flavor	Comments	Pollination
 Blue Damson	Late August-September	Small, round blue fruits	Excellent for jams, jellies and preserves. Vigorous growth	Self fertile
 Imperial Epineuse	August/September	Medium size purplish red fruit; Meaty, rich, sweet and firm with yellow flesh. Freestone.	Very productive; great for fresh eating or drying. Highly regarded old variety	Pollinate with any other European Plum
 Italian	August/September	Medium to large purple fruit; juicy with distinctive rich, sweet flavor. Freestone.	Great for canning & drying; early reliable producer	Pollinate with any other European Plum
 Seneca	September	Large reddish fruit; crisp yellow flesh, very sweet. Freestone	Good disease and crack resistance; good for fresh eating, canning and drying	Considered self-fertile, better fruit set when pollinated with any other European Plum
 Yellow Egg	August/September	Large golden yellow fruit; firm, juicy yellow flesh. Freestone.	When fully ripe, rich & sweet, tart if picked early. Productive tree; good fresh and canning	Considered self-fertile, better fruit set when pollinated with any other European Plum

Pluerry

Pluerries are complex fruit hybrids, mainly from Japanese plums and cherries. They have predominantly plum heritage with fruit

 Candy Heart Pluerry	August September	"Skin is dark speckled red, with amber-red flesh"	"lightly subacid and very sweet, with a wonderfully unique flavor"	Pollinate with another Pluerry or Burgundy Plum
 SweetTreat Pluerry	July August	"Much larger than a cherry, this precocious and prolific variety will hang on the tree for over a month"	"Combines the sweetness of a cherry with that summer fresh plum zing"	Pollinate with another Pluerry or Burgundy Plum
 Sugar Twist Pluerry	July August	Red fruit with yellow flesh. Complex flavor "cherry sweet with a plum twist".	Newest pluerry; ripens a month earlier than Sweet Treat.	Pollinate with another Pluerry or Burgundy Plum
